

BLOXELS®

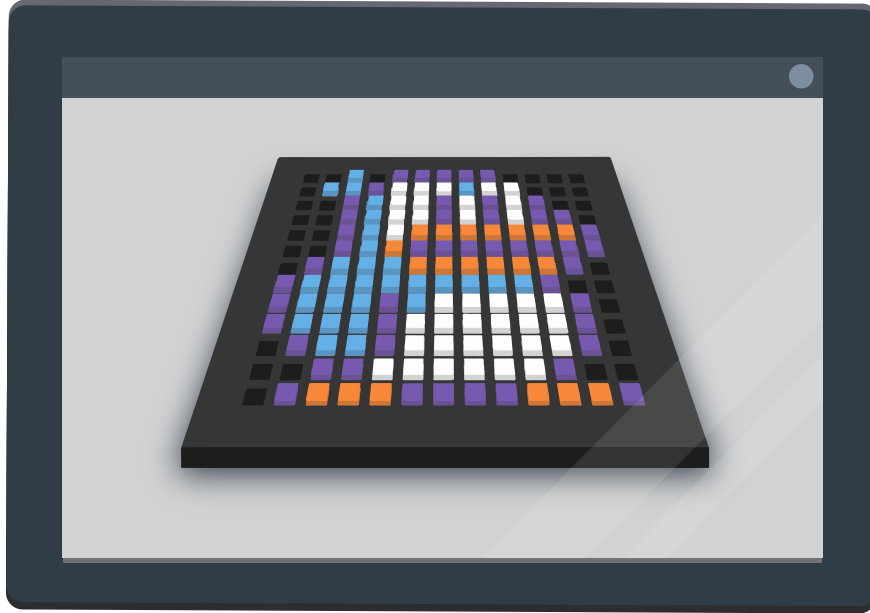

Capture Tips

- Pick a spot with a light, non-reflective surface. Avoid harsh lights.
- Make sure nothing else is in the frame!
- Hold your device so the board is at a slight angle (avoid extreme angles). When in doubt, move around a little!
- Bring the entire board into the window. You'll be 2-3 feet away on most devices.
- Dedicate a single device for capturing in your classroom's "Capture Station". Log in as an educator so you can share captures with the whole class.
- Educators can share and send! Choose to send the captured asset to individual students or the whole class.
- Remember, you can always easily edit your artwork after capturing, so don't stress if a few blocks didn't properly capture!

Avoid distracting textures & busy surfaces. Keep the board flat & area clear of objects

Tilt device angle forward or backward as needed

Hold device steady as the app begins to register your board
